

Systems Integration Engineer/RPAS Pilot

for Australian UAV Technologies P/L known as Silvertone® UAV.

Silvertone® UAV is a fully Australian-owned company designing and developing autonomous technology in the field of unmanned vehicles and requires a **skilled technician and flight operator** to bolster our existing team.

Currently the company has an autonomous Flamingo® Mk3 Remotely Piloted Aircraft (RPA) in the later stages of prototype testing and is producing more autonomous Flamingo® MK3 aircraft for demonstration, marketing and R&D purposes and has plans to develop new RPA's.

Silvertone® UAV is contracted to participate in commercial and Defence activities for the demonstration of current and future capability. The successful development and commercialization of the Flamingo® Mk3 has attracted commercial interest to further expand on our technical capability.

This position is based in WAGGA WAGGA at Head Office and will report to the Program Manager and will work closely with the Avionics & Software Systems Engineer and the Chief Pilot.

We need an experienced R&D or production engineer who can assist with development and maintenance of our RPA fleet. This will involve integration of customer payload options, development of new avionics packages, aircraft production and flight testing. Skills that would be beneficial include PCB design using EDA software, CAD and Solid Modelling expertise, 3D printing. Attention to detail and ability to manufacture with precision is a must.

Suitable backgrounds could involve the disciplined process applied by aircraft or vehicle design, manufacturing or maintenance, and would include documentation of process, capability to write training and operations manuals, knowledge of mechanics and electronics.

A military background (including eligibility for Defence clearance) in such skills would be advantageous.

Prior experience in remotely Piloted Aircraft manufacture and flight would also be helpful but is not critical.

We, as a small company, most importantly need a team player looking to learn and add value to our existing skill sets, keeping us at the forefront of RPA Design, Development, Manufacture and Operations.

Visit our website for background on our business and contact our Program Manager, Travis Downie, with an enquiry or for a detailed job description or with your resume at

program.manager@silvertone.com.au or call him on 0407384684.
